Clock Works

Structures II
William Hammack
By: Julie Finney
Project Overview

- I worked with fourth graders at Farmington Intermediate Elementary, and helped them review what they have already learned about telling time.
The Lesson

• On November 20, 2009 I went to Farmington Intermediate Elementary.
• I made small clocks for the students so they could have their own personal clock.
• They had their clocks and we went through several stories I had made up and the students had to manually tell me the time and the end of the story.
My Experience

• The students loved having their own clocks.
• They also loved the stories. They cooperated very well and listen to the stories very closely.
• At the end of the lesson the students told me that having their own personal clock helped them understand a little better.
Methodology

• I talked to the cooperating teacher and came up with a lesson and fun activity for the students to do.

• I put the proposal together, the lesson plan, and took a few pictures of the students.
Technology

- Word
- PowerPoint
- Printer
- Elmo (in the classroom)
Skills Developed

- Organization
- Commutation
