Our tutoring program will help build confident learners, establish CAN DO attitudes, and provide helpful test taking skills.
**PROGRAM OBJECTIVE**

Our program is designed to enhance the math skills of 4th grade students. Our goal is to build a rapport with students and help ensure that they can conquer any math task. We will help students become confident learners; increase their knowledge in areas of weakness; and provide helpful test taking skills. It is our goal to get the math skills to a proficient or advanced level. The groups will consist of two students and one instructor.

**Session 1:**

This session will consist of “getting to know the student” and a pre-test. The pre-test will let the instructor know areas of weakness of each student.

**Sessions 2 & 3:**

The students will be given sample questions from previous Benchmark Exams and will be taught how to effectively work through each problem. At the end of the session, there will be a brief review with the students to make sure they have a clear understanding, and praise will be given for a job well done.

**Session 4:**

Students will be given a post-test to determine the effectiveness of this program. Per recent trial of this program, it has been shown that the students scores did improve from the pre-test to the post-test, and the confidence levels of the students along with the test taking skills were dramatically improved.

**Intro to Education**
