In # 1-3, factor each polynomial completely.

1) \(2a^5 + 4a^2\)
2) \(z^2 - 25\)
3) \(m^4 - 2m^2 - 4m^2 + 8\)

4) Write the polynomial in descending order. Then factor the polynomial (completely).
   \(25x - 5x^2 - 30\)
